Made in USA

How to use the Quad-Stripper to remove inner foil, burnish the end of foil/foam core and make connector insertion easier.

Insert 6/59 cable into the nest. Outer insulation should be flush to tool body. Rotate tool one or two revolutions

Fold back braid

For 7/11 cable use nest on opposite side of tool.

Peel off scored foil to expose second layer of braid.

Fold back second layer of braid exposing foil covered foam core.

Insert 6/59 cable into the nest. Push down into nest and rotate back and forth between fingers.

This operation burnishes the end of the foil/foam core and flairs out braid to make connector insertion easier.
